The Erasmus project has had dissemination on local and Central Italy's papers as documented in the following links:

Following the great impact of the project on our school community, we have also joined Eco-Schools, an international programme of the Foundation For Environmental Education (FEE) which is for schools that intend to promote sustainability through environmental education and ecological management of the school building. The programme involves the whole school in a virtuous path which culminates with the certification and award of the Green Flag. (see pictures on the link below)

Furthermore, since our project has increased the respect for the environment, this year we have replaced single-use water bottles from the vending machines with water refilling stations on every floor of the school.
(see pictures on the link below).
